1-1/4" AVT® Rotary Hammer, accepts SDS-PLUS bits

CATALOG (SKU) NUMBER: MK-HR3210C

Powerful 8.2 AMP motor delivers 4.7 ft.lbs. of impact energy to handle the most demanding applications. Constant speed control automatically applies additional power to the motor to maintain speed under load to complete the most challenging jobs. Soft start suppresses start-up reaction for more control and better accuracy. L.E.D. service light notifies the user approximately 8 hours before the brushes need to be replaced. Anti-Vibration Technology is an internal counterbalance system that greatly reduces vibration and directs more impact energy to the work surface for increased user comfort and greater productivity. Variable speed control dial enables user to match the speed to the application for greater versatility. L.E.D. power light indicates switch failure or cord damage. Torque limiting clutch engineered to prevent gear damage by automatically disengaging gears if the bit binds. Sequential impact timing delivers timed hammering during rotation to minimize overlapping bit impacts for up to 50% faster drilling. Extended life brushes are longer for more work between service intervals and less downtime. Automatic brush cut-off protects commutator from damage for longer tool life. 3-mode operation for "Rotation Only", "Hammering with Rotation" or "Hammering Only" for multiple applications. 16 bit angle settings allow the bit to be set at different positions for operating convenience. One-touch sliding chuck allows for quick bit changes. Lock-on switch for continuous operation ("Hammering Only" mode). Rubberized ergonomic soft grip provides more comfort. Makita Motor Advantage engineered with field core interlocking steel laminations, dual ball bearing armature and more copper commutator bars, increasing energy transfer efficiency for more power and longer tool life.
