Dust Collection Vacuum Attachment

CATALOG (SKU) NUMBER: MK-DX01

The HEPA Dust Xtraction Vacuum Attachment is trigger-activated for user convenience. The rubber suction gasket is engineered to provide consistent contact with the work surface, where the dust is channeled to the clear dust container with HEPA filter, which captures 99.95% of dust particles (size .3 microns). An added feature is a 2-second delay on the vacuum motor: After the trigger is released, the 2-second extended suction collects remnant dust and particles as the bit is being pulled out of the work surface, making the LXRH011 ideal for overhead drilling.

The high capacity dust container is clear and provides an accurate level indicator of collected material. The container also has the largest material holding capacity in its class with faster and more convenient disposal of material than leading competitor models for less downtime. The vacuum attachment has a quick release and can be easily detached from the rotary hammer when not needed.

Additional ease-of-use and efficiency features include 3-mode operation (rotation only, hammering with rotation and hammer only), a large 2-finger trigger for more convenience and greater comfort, and a depth adjustment guide for increased drilling depth accuracy.
